INTRODUCTION.

Victoria is situated at the south-eastern extremity of the Australian continent of which it occupies about a thirty-fourth part, and contains about 87,884 square miles. It lies approximately between the 34th and 39th parallels of south latitude and the 141st and 150th meridians of east longitude. Its greatest length from east to west is about 493 miles, its greatest breadth about 290 miles and its extent of coast-line (including the length around Port Phillip Bay, Western Port, and Corner Inlet) 980 miles. It is bounded on the north and north-east by New South Wales from which it is separated by the River Murray and by a straight line in a south-easterly direction from a place near the head-waters of that stream, called The Springs, to Cape Howe. On the west it is bounded by South Australia and on the south and south-east its shores are washed by the Southern Ocean, Bass Strait, and the Pacific Ocean.

The climate of Victoria is characterized by warm summers, rather cold winters, and rain in all months. Mean temperatures in midsummer (January) range from 65 deg. (Fahr.) in the south to 75 deg. (Fahr.) in the north-west, corresponding means of daily maxima being 80 deg. (Fahr.) in the south and 90 deg. (Fahr.) in the north-west. In midwinter (July) the mean temperature is generally below 50 deg. (Fahr.), mean of the night minima being below 40 deg. (Fahr.).

ACKNOWLEDGMENT.

Much of the information in this "Abstract" is obtained from the Commonwealth Statistician and other authorities. Acknowledgment with thanks is made to all those responsible for the furnishing of these particulars.

Note.—The above index has been computed by the Commonwealth Statistician.

MELBOURNE WHOLESALE PRICE INDEX-NUMBERS.

The index of wholesale prices was first computed by the Commonwealth Statistician in 1912 and relates chiefly to basic materials and foods weighted in accordance with consumption in the years immediately preceding that date. Neither the component items nor the weighting have been varied. Consequently the index is a measure of changes in wholesale price levels based on usages which have altered substantially since the period on which the weighting was determined. As such it is useful as an indication of long-term trends on the assumption that the relative importance of component items remained constant. But it no longer serves as a measure of price variations from month to month or from year to year of commodities weighted in accordance with present-day consumption. A table relating to this index for varying periods from 1861 to 1950 is shown in issue No. 26 (March, 1953) of this publication. Particulars for subsequent years may be found in the "Labour Report" issued annually by the Commonwealth Statistician.

WHOLESALE PRICE INDEX-NUMBERS—BASIC MATERIALS AND FOODSTUFFS.

Following a conference of Statisticians in 1930 an index by the Commonwealth Statistician has been computed from new data on prices and consumption. Both in contents and method of computation it differs from the Melbourne Index of Wholesale Prices referred to in the previous paragraph. The price quotations have in the main been obtained directly from manufacturers and merchants, and, with a few important exceptions, from Melbourne sources. Apart from home-produced building materials and one or two minor commodities, however, the price movements may be taken as representative of fluctuations in wholesale prices of basic materials in most Australian markets. The weighting system adopted is based on average annual consumption during the years 1928-29 to 1934-35 inclusive.

(a) Gross value is defined as the value of recorded production at the wholesale price realized in the principal markets. In cases where primary products are absorbed locally, or where they become raw material for secondary industry, these points are presumed to be the principal markets.

(b) Costs of production include stock feed, seed costs and pickling, manures, spraying, sheep and cattle dips, power, fuel, water, and all other materials used in production, but exclude depreciation, wages and maintenance costs.

(c) Not available.

(d) Manufacturing is included at its net added value because the gross or wholesale selling value contains so much duplication of products, the finished article of one class of manufacture forming in numerous cases the raw material for others.
